- ✓ The user can generate, manipulate and present strategic information to all levels of the business, from Shop Floor to Boardroom.
- ✓ Links with your existing Treefrog Loss & Waste Databases
- ✓ The key to your businesses success.

The new Treefrog Loss & Waste Query Engine Already in front with experience Behind it.

This allows the user to select key business drivers to report on and is the 1st step of query generation. Each "Focus" area is then sub divided into several business categories, allowing you to customise your reports.

Time is the most crucial element of any business report and in the Query Engine we have developed a clear and precise date functionality, allowing you to pin point precisely when the problem occurred or just check data over a period.

This stage starts to bring the Query together asking the user to identify the reporting elements to report on within your business. You can select as many or as little as you require to achieve your report.

Another valuable element in any report is the structure of that report; the Query engine does this for you, just select what you wish to sort by and whether 'Forwards' or 'Reverse' and the system will do all the hard work.

Even more functionality has been added at this stage, giving the user the ability to customise their report even further. This added ability turns your reports into more professional documents and presentable information.

This allows the user to see on the screen what you have just generated before printing/exporting to another file, giving you a final check of your Query. You can still go back and amend your query at this stage if you require.

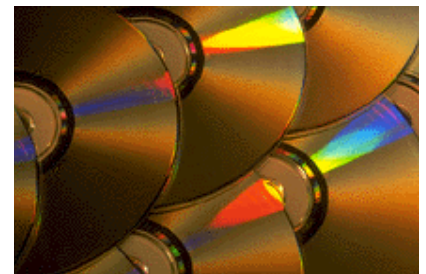

The Treefrog Loss & Waste Query Engine is the key to your success, giving you the ability to report on all your business critical issues on the click of your mouse.

It is fast, reliable and accurate allowing you to focus your attentions on more pressing areas, and generate, manipulate and present useful information to all areas of the workforce, from shop floor to boardroom.

The Query Engine is yet another module in the Treefrog Loss & Waste product range and links dynamically with your existing Treefrog Loss & Waste databases to retrieve the data you requested in real time.

The Query Engine comes pre configured and pre defined within your Treefrog Loss & Waste System, all you need to do is click on the "Query" button and off you go.

If you require additional information, extra functionality or more copies of the Treefrog Loss & Waste Query Engine please contact Treefrog Software Ltd, at the address below, and we will be pleased to help you.
